

Simple Star Cards

Our next free template is taken from the Stunning Stars 3D collection - a five pointed star shape in the largest size. The full template includes, a further five pointed design, six and seven pointed designs, all in four different sizes. You can use the template to make 3D stars or cut off the tabs and use it as a simple star shape.

Simple but elegant embossed star and tags

Cut off the tabs from the template, as you are not making a 3D project. Lay the star along the top fold of a card blank. This card folds along the top and rests on the two points at the bottom. Run the card through an embossing folder and add a ribbon to make a super quick card.

To get the free star template in the largest size, head to the Free Stuff pages under the Christmas Countdown tab.
