

Stunning Star Card

Just a quick simple card today, as I haven't had much time and have been rushing about doing all kinds of things, including starting a new job! This card is quick and simple but still looks lovely and those are often the best type of projects aren't they?

I'm using the six-sided star from the [Stunning Stars Template](#). Just take the largest star and lay along the fold of your silver base card, making sure the fold is at the top and the star sits on two points at the bottom, as I have done above. Cut out the star and run through an embossing folder. Add a simple stamped greeting secured with a mini peg and you are inished!
